## RADAR STATION

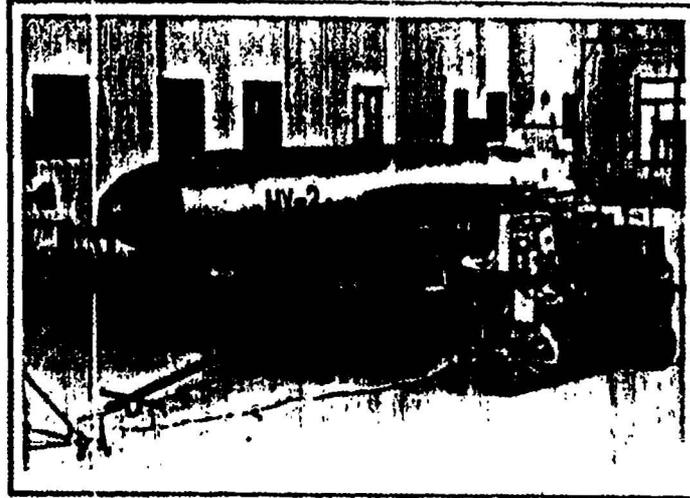

The ground tracking radar station of HY-2 missile system is capable of both searching the target and accurately tracking the target. The fire control system adopts special electronic digital computers of high-quality discrete components, attacks the lead point of target movement, it has multi-operational modes. It is characterized by excellent performance high accuracy and easy operation.

UNCLASSIFIED

The HY-2 missile is a surface-to-surface, low altitude, near-sonic and self-control and self-guidance tactical anti-ship missile. It has a long firing range, a great destructive capability and a high hit probability. It is a powerful coast-defense weapon firing against the large or medium-sized fighting ships.

The HY-2 missile can be placed in the tunnel, and moved out when launching. It can also be divided into several sections which are separately installed on the motor vehicles. So it has a good concealment and flexibility to conduct sustained and mobile combats.

La missile sol-navire HY-2 est un missile tactique autocommandé et autonome qui vole à basse altitude et à une vitesse quasi sonique. Ayant une longue portée, un haut pouvoir de destruction et une forte probabilité d'atteinte et possédant une certaine capacité de sélection d'objectifs, il est capable de détruire des bâtiments de grande ou moyenne importance. Ce missile constitue une arme puissante pour la défense côtière.

Le missile HY-2 peut être installé dans un tunnel dont il sort en cas de tir ou être déployé en plusieurs parties et monté sur des véhicules, ce qui permet d'assurer la dissimulation et la capacité de mener un combat souterrain et mobile.
